

# ACCUMLULATOR

## Roblon ACC1400

### Roblon ACC1400 accumulator

Integrates with twisters and extruders to create in-line twisting system

Can be integrated with take-up winders if yarn is to be cooled, softened or dried pre-winding

For monofilaments

For tape

For danline

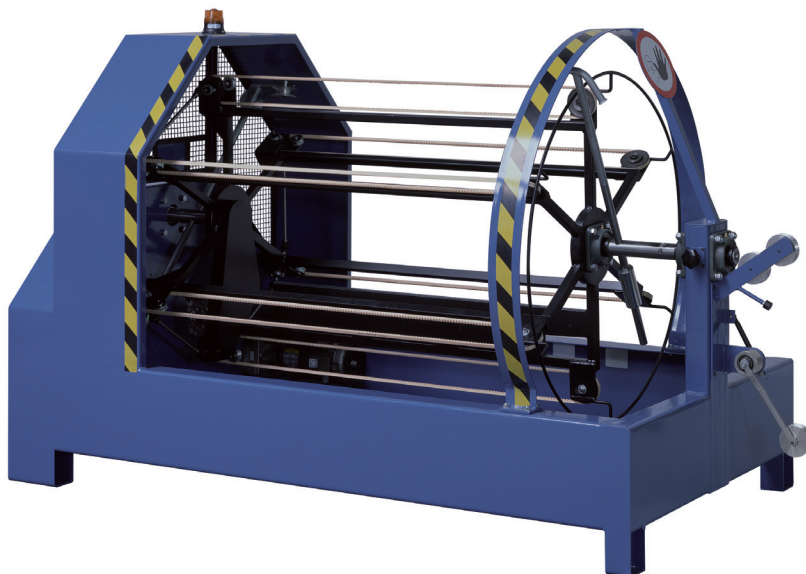

For products in 5,000-100,000 denier range

### Key features

- Easy to maintain
- Simple, robust design
- Overrun protection
- Constant in-feed tension as pulsations are absorbed during unwinding

### Standard equipment

- System for preventing overrun when twister or winder stops
- 'Dancing arm' for absorbing pulsations
- Warning signal upon yarn break
- Warning signal in event of overflow

# ACCUMLULATOR

## Roblon ACC1400

### Optional equipment

- Fan for cooling or drying yarns and filaments
- Gears for changing pitch

### Technical data

Yarn:	5,000-100,000 denier
Yarn capacity:	Max. 1,400 m
Feeding speed:	0-max. 200 m/min.
Motor:	Inverter drive 0.55 kW
Voltage:	As required
